The largest tri-car manufacturer in mainland China

40,000 electric and petrol tri-cars sold in 2010

In 2010, sales in mainland China of our electric and petrol tri-cars reached 40,000 units – an 80 percent market share – making us the largest tri-car manufacturer in the region. And during the first half of 2011, sales here of our four-wheeled electric cars reached 2,000 units. We've worked hard to swiftly seize the mainland China market. Not only this, but we were also the first mainland Chinese company to export our products to the US.

Since 2003, our Fulu-branded vehicles have been synonymous with reliability. We make our vehicles in our 83,000m^2 production facility, with over 1,500 employees handling everything from NC molding to ensuring orders are ready to ship. One-year or 10,000-kilometer warranties are included. Contact us today.

Electric 4-wheeled car during assembly

E-car
- Steel body
- 60V 210AH, 10-cell battery
- 5.5kw motor
- Dimensions: 3,140 x 1,500 x 1,525mm
- One 40-foot container holds 5 units
