

17 years behind our DIY wireless security systems

Wireless home security system

- 8 security zones
- 4 operating modes: alarm, alert, home and standby
- 10-second exit and 30-second entry delay functions
- LCD and key fob controls, with built-in panic button

For 17 years, we've been providing our clients with competitively priced devices that offer total security. We specialize in DIY wireless, RF and power supply products for both residential and commercial properties. Our featured Red Shield™ wireless home protection system can be used as a standard alarm or upgraded using a range of compatible accessories, to offer protection in external locations such as garages, sheds and outbuildings. This device has an operating frequency of 868MHz or 433MHz, meaning the sophisticated smart panel within the system can monitor sensors placed up to 250 or 150 meters away, respectively.

Our factory is equipped with 20 assembly lines, as well as plastic injection molding, tool-making and electronic circuit design and testing facilities. These resources allow us to produce up to 500,000 sensors and alarms, 200,000 power supplies, chargers and inverters, and 200,000 RF access controls monthly. All of our products bear CE, FCC, IC, C-Tick and other safety marks for hassle-free distribution. Contact us today to find out more.
