

# Our radial drilling processing ranges from diameters of 25 to 125mm

Established in 2000, we produce a range of machinery including radial, bench, porous and CNC drilling machines, as well as machine components. Our radial drilling processing range is wider than many of our competitors, with machine diameters ranging from 25 to 125mm, whereas others usually only offer machines with diameters from 40 or 50mm. We are ISO 9001:2000-certified and our products also carry CE marks. A one-year warranty is offered on all products, and damaged parts can also be replaced for free within that time. You needn't worry about technical assistance, as we provide lifetime support on our products. Inquire today.

Radial drilling machine, diameter range from 25 to 125mm
