

18 years of OEM/ODM electric heater experience

A vendor to Home Depot with 50 new items every year

Since 1995, we've been supplying electrical appliances to wholesalers and distributors in North America, Europe and other regions. The 15 engineers on our R&D team develop 50 new items every year based on the latest trends. You can choose from our collection or let us handle your OEM/ODM projects like we have done for Glen Dimplex for the past 12 years.

Today, our export volume is one of the largest in the industry. We ship 200 forty-foot containers filled with products such as heaters and fans each month, and are able to produce up to 400,000 units each month for volume orders. Eight production lines, two assembly lines and a jet-plastic line from Germany help our ISO 9001:2000-certified factory achieve this massive capacity.

For your peace of mind, we offer warranties ranging from six months to two years. Find out why Home Depot has chosen to source from us by inquiring now.
