

- AM/FM/SW1-7 9-band radio with digital display (NS-808U)
- 2,400mA rechargeable built-in battery
- USB port, SD card slot and AUX input • Recording function

At least 5 new items developed each month

We place 4 to 8 QC technicians on each production line

Source your multifunction radios from us and you will never be short of new products to offer your customers. That's because our R&D engineers – who each have between 8 to 10 years of experience – develop five to eight new items every month. They can also have a new sample created based on your specifications within two months.

Our 15,000m² factory houses eight production lines, which we use to produce 300,000 units monthly. We have our own brand – NNS – and apart from multifunction radios, we also manufacture digital radios and voice recorders.

Quality control is carried out by 60 technicians who each have more than five years of experience. We place between four and eight of these QC team members on each production line, ensuring our products have a qualification rate above 98 percent. Contact us now.
