Twenty new products monthly to heat up sales in your market

Wireless thermostat with large temperature adjustment knob for electric, gas, water radiant or oil based heating and cooling systems

Our team of R&D engineers utilizes its 10 years of experience to develop 20 new programmable thermostats, motorized valves and sensors every month. Thanks to their hard work, our catalog now includes more than 600 different products. They can also create prototypes based on your specifications in seven days, and make custom molds in 40 days. And, to ensure that our items will meet your customers' highest quality expectations, we also test our products more rigorously than our competitors. Each unit is subjected to spring-hammer, 3,000V AC, valve-leak detection, EMI interference and many other tests. Contact us today for more details.

Programmable wireless thermostat for electric, gas, water radiant or oil based heating and cooling systems
