

Our chainsaws last twice as long

Thanks to superior engine production

8" chainsaw (ZM2000)

- Automatic chain tension
- Quick ignition
- Advanced air-intake system
- Tool-less technology
- Spring antivibration system
- Carburetor with primer pump

Gasoline chainsaw (ZM5010)

- Magnesium alloy crankcase, lightweight and durable
- Patented starter design reduces starting efforts
- Optimized cylinder design provides more power
- Advanced antivibration system
- Safety grip handle

Longer-lasting tools will keep your customers happy – and keep them coming back for more products. We use a plasma vapor deposition process to coat our engines. This process doubles engine life span and reduces emissions.

Oregon and Walbro components

And that's not the only reason our chainsaws are better. Oregon chains give our chainsaws stronger cutting ability, and we use carburetors from Walbro. We use magnesium alloy to produce our lightweight crankcases – most of our competitors use heavier aluminum alloy.

Shipped in 15 days

We have more than 20 years of experience in this industry. Using seven production lines, we turn out up to 600,000 units annually and ship orders in 15 days. We also welcome minimum orders for 500 units per model.

GS, CE and EPA approvals

Our 100 R&D experts welcome your OEM/ODM projects and develop four new power tools annually. Each product undergoes 10 rounds of QC at our testing lab. This helps to ensure that our tools carry GS, CE, EMC and EPA certifications. Inquire today.
