

Diverse materials, finishes widen selections

Top trends

- **Hot- & cold-rolled, galvanized types lead:** These three categories combined represent about 70 percent of China's total supply of steel coils. Most products meet international quality standards such as ASTM A653, AISI, EN 10326, DIN 17162 and JIS G3302.
- **Diverse materials:** Q235B, Q345B, SPHC, 510L and Q345A are the main options for hot-rolled steel coils, while SPCC, SPCD, SPCE, DC01 and DC02 are for cold-rolled variants. The 304, 316L, 2205, 310S and 309S are the mainstream stainless steel coils.
- **Varied surface treatment options:** Products undergo treatment for heat and water resistance, and anti-oxidation. Oil mill, 2B, sandblasting, BA, mirror and embossing finishes are also popular. For color coating, most makers can turn out models in RAL1000 to RAL9018. They can customize hues as well.

Sourcing News & Advice
