

Original PVC, woven options expand selections

Top trends

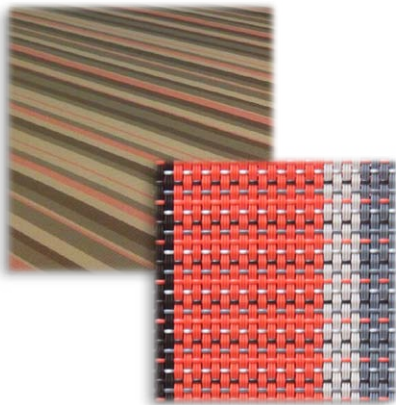

- **Expanding line:** About 20 to 30 percent of China's flooring tile supply comprises vinyl types. Continuous improvements in aesthetics and durability, and greater cost savings compared with wood and ceramic alternatives will boost the category's output share in coming years.
- **Quality upgrades:** More makers are using original PVC instead of recycled ones for its better durability and sound absorption, anti-bacterial and flame-retardant features. A growing number of new items come in woven vinyl backed by PVC foam, which is created using shuttleless machines and yarn with special cladding structure.
- **Popular designs:** Wood, marble, carpet, and galaxy grain are widely adopted. Many items come in pure color such as black, gray, blue, green, red, orange, purple and silver. Products are suitable for residential, commercial, even school and hospital requirements.
