The Apple Find My

What is the network for Apple Find My?

The Find My network is launched by Apple, in this network , all Apple devices worldwide (iPhone, iPad and Mac) can help you find lost items. If your item is dropped in a distant location such as parks, gyms, subways, etc., the "Find My" network will help you track your item which support the Find My network. This vast network consists of tens of thousands of iPhones, iPads and Macs around the world and has been carefully designed to ensure your privacy is protected every step of the way.

The "Find My" app is available on iPhone, iPad and Mac,You can use it to easily locate your Apple device, and there's a way to find it even when it's offline.Your privacy is always protected throughout the process.

How does the Find My network work?

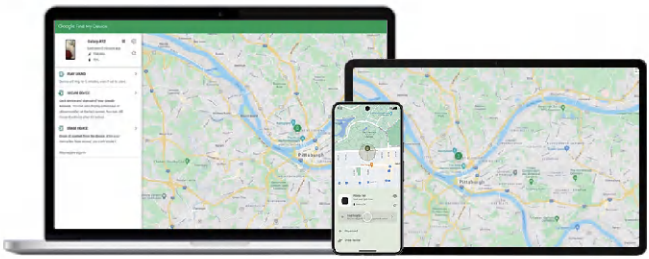

The items which support the Find My network send out a secure Bluetooth signal that can be detected by nearby Apple devices in the Find My network, which will upload the location of your Find My network-enabled items to icloud.Then you can see it on the map in the "Find My" app.The entire process is anonymous and encrypted to protect your privacy, and the search process is precise and efficient, so you don't need to worry about data consumption or battery life.Through Find My network,thousands of unsung heroes can help you find items together.

The Google Find My

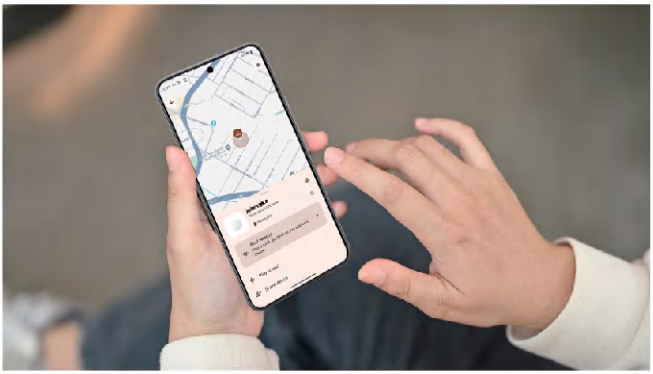

What is the network for Google Find My?

The Find My network is a crowdsourced network of Android devices that uses end-to-end encrypted location information to help Android users find their lost devices. Launched by Google, in this network , Google android devices worldwide can help you find lost items. If your item is dropped in a distant location such as parks, gyms, subways, etc., the "Find My" network will help you track your item which support the Find My network. This vast network consists of tens of thousands of android devices around the world and has been carefully designed to ensure your privacy is protected every step of the way.

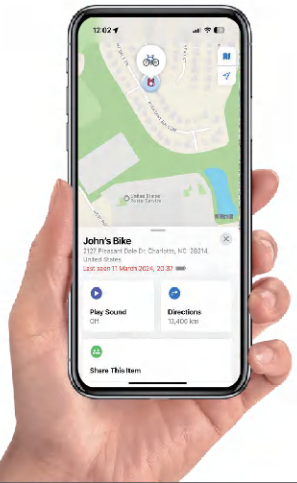

How does the Google Find My network work?

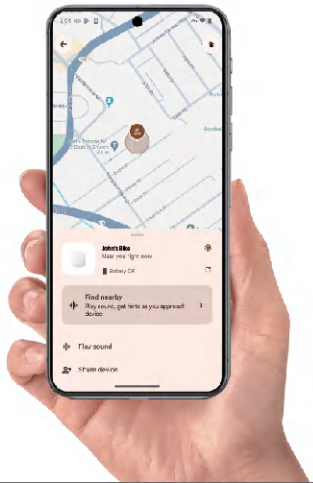

The items which support the Find My network send out a secure Bluetooth signal that can be detected by nearby android devices in the Find My network, which will upload the location of your Find My network. Then you can see it on the map in the "Find Device" app.The entire process is anonymous and encrypted to protect your privacy, and the search process is precise and efficient, so you don't need to worry about data consumption or battery life. Through Find My network ,thousands of unsung heroes can help you find items together.

Our products feature find my network support

By partnering with Apple and Google,we've launched hardware products that support the Find My network, and you can call devices in Apple's or Google's Find My app to discover items. At the same time, if the device is lost, the Apple's or Google's Find My network can help find it, which means that all Apple IOS or Google android devices (mobile phones, tablets, and MAC) can help find it.
