

Shenzhen Wochuan Electronic Co., Ltd.

BSCI, ISO Certified and professional manufacturer specializing in personal care and beauty care device over 12 years

2024

YOUR SOURCE FOR SELF CARE AND BEAUTY CARE DEVICE

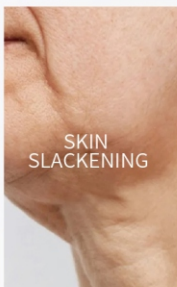

LOOKING FOR DISTRIBUTORS IN EUROPE

BEAUTY Düsseldorf 2024

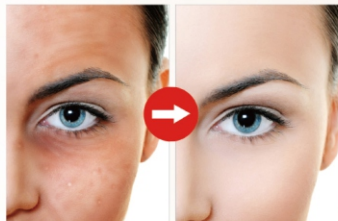

- Exhibition Location: Messe Düsseldorf
- 🕒 Exhibition Time: 22th~24th March 2024
- 📍 Booth No.: G63-1
- 📍 Add: D-40474 Düsseldorf, Am Staad (Stockumer Höfe)

HOME USE BEAUTY INSTRUMENT

A divine tool for solving skin problems below!

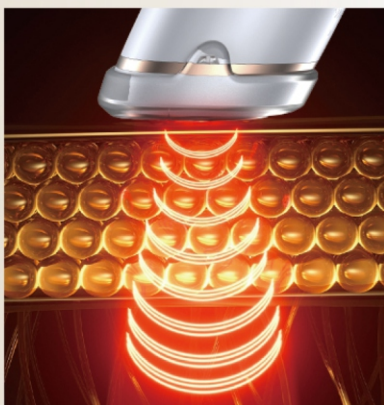

EMS Principle:

EMS Micro-current is a low-level current, which can stimulate the face by sending soft electric waves to facial muscles through skin and tissues. It has been proved that microcurrent can stimulate the production of ATP, accelerate the blood circulation system, stimulate the vitality of facial muscles and promote the production of collagen and elastin, which has the functions of wrinkle removal.

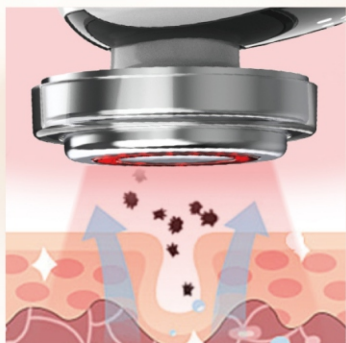

RF Principle:

When radio frequency is used on the skin, the energy will have an effect through skin contact, which will heat the dermis, stimulate the fibroblasts in the skin and direct the regeneration of collagen. The aged collagen fibers stretched at the bottom layer instantly tighten and shorten after absorbing radio frequency heat energy, which instantly improves the skin appearance and prepares for the newly established collagen layer. At the same time, radio frequency can enter deep tissues, improve circulation, promote metabolism, and promote the discharge of long-accumulated waste toxins. When replaced by new collagen, the skin will be more elastic and wrinkles will gradually fade away. Continued treatment can achieve the effects of fading wrinkles, firming the skin and instantly whitening.

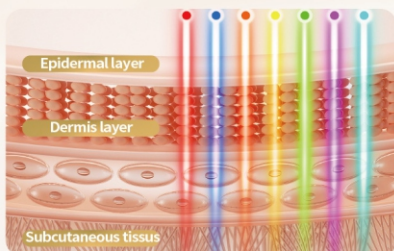

Ion-derived Cleaning Principle:

The adsorption force of positive ion charge can adsorb the aged keratin and dirt remaining in the deep pores.

Photon Light Rejuvenation Principle:

The principle of photon rejuvenation is mainly to use the principle of strong light to improve the skin color problems of patients. Mainly through the principle of light and heat, the local pigment tissue is quickly destroyed, so that the damaged pigment tissue is quickly absorbed by the metabolism of the human body, thus improving the symptoms and making the skin smoother and more delicate.

PAINLESS IPL HAIR REMOVAL

What is IPL?

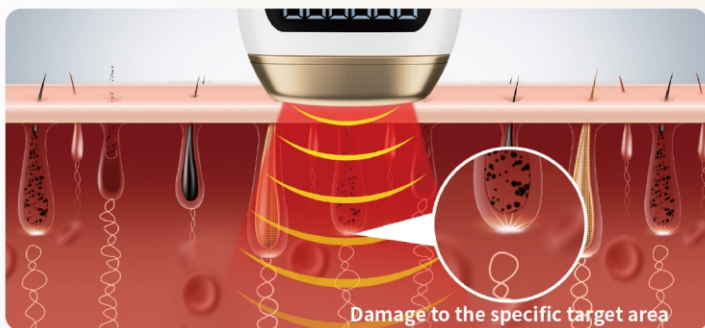

IPL (Intense Pulse Light) is a type of intensive broadband and incoherent light with a wavelength spectrum spanning 420nm - 1200nm.

IPL (Intense Pulse Light) :

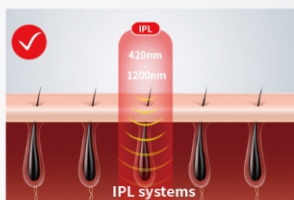

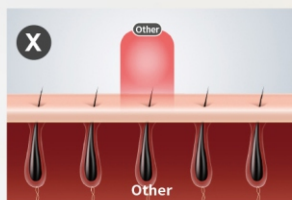

IPL provides a wide range of non-invasive applications based on the human skin's selective absorption and photothermolysis.

IPL systems work on the same principles as lasers in that light energy is absorbed into particular target cells with colour (chromophores) in the skin. The light energy is converted to heat energy, which causes damage to the specific target area.

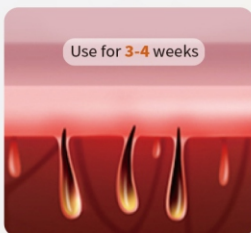

IPL systems VS other systems:

IPL systems are different to lasers in that they deliver many wavelengths (or colours) in each pulse of light instead of just one wavelength.

Permanent hair removal:

Real test for 4 weeks the effect is obviously

HIGH SPEED IONS HAIR DRYER

Function and efficacy of negative ion hair dryer:

The negative ion hair dryer is mainly equipped with a negative ion generator and a semiconductor refrigeration device. In this way, when the hair dryer works, it can generate negatively charged ion particles (generated by the negative ion generator) and water vapor particles (generated by the semiconductor refrigeration device) to neutralize the common positive charges in the hair, thus smoothing out the messy hair, making it smooth to fit, and eliminating static electricity. Make hair smoother and easier to comb, and the styling effect is more ideal.

High speed blower:

The speed of the air duct of the high-speed blower can reach 110,000 rpm. At the same temperature, high-speed hair dryer can quickly evaporate excess water from hair; Under the same air volume, the speed of the air duct of the high-speed blower is higher, so it can evaporate excess water from the hair and make the hair more fluffy.

Effect after use:

HIGH SPEED IONS HAIR DRYER

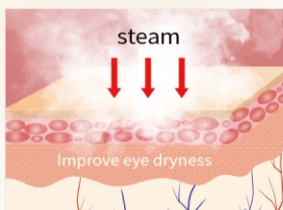

Principle of micro-current heating vibration:

The micro-current heating vibration technology of massager is a technology that uses weak current to generate heat and vibration. Its principle is that micro-current acts on human tissues, which makes the ions and molecules in the tissues oscillate and generate energy. This energy can be converted into heat and mechanical vibration, which can relieve muscle fatigue, promote blood circulation and improve body function.

Function and principle of steam eye massager:

Steam eye massager is a small electronic device that can relieve eye fatigue, improve dark circles and bags under eyes, and eliminate eye inflammation. It can improve the eye surface environment through thermal effect, and bring you a comfortable eye experience through atomization and hot compress massage. The atomization function of the eye moistening instrument can produce fine water mist, which can moisten the skin of the eyes and increase the moisture content of the eyes, thus alleviating the symptoms of eye fatigue and dryness. The hot compress massage function of the eye moistening instrument can promote blood circulation in the eyes through warm massage, and at the same time, it can also dilute dark circles and bags under the eyes, relieve eye fatigue and make your eyes healthier.
