I've been pleasantly surprised by this so far. Works pretty well in my 2021 Hyundai Tucson. It was easy to set up and I haven't really had any issues. Occasionally it'll say "Bluetooth pairing unsuccessful" when I first turn on the car and it's looking for my phone, but it always pairs on its own after that. I can unplug it to use wired Airplay and it syncs right back up when I plug it back in - never had to re-pair. It's definitely a little laggy - when you press something on the car's screen, it takes a second for the action to happen. But that's to be expected with Bluetooth, especially when using an intermediary device. Overall a pretty solid purchase!

Surprisingly fast connection speed, the product runs consistently without lag

I buy a ton of stuff on Amazon so I don't review much but after seeing some negative reviews, I have to tell you this thing is magical! Especially if you have teenagers that drive, you could throw their phones in the trunk and they could still have access to only the safe features of their phone without ever having to bring it into the front seat! This thing has no delay at all. I don't know what anyone's talking about, it syncs up perfectly, and I didn't even have to open the directions. All I did was plug it in and go...as soon as I got this I went ahead and bought one for my husband, a[illegible]nd it give it a try for sure! Big fan!
