03 CDEA

04 Betaine

PRODUCT DISPLAY

Part One

1, SLES

Keep container tightly closed.
Keep in cool and dry place, avoid extreme heat and cold, Store in clean, dry preferably. In sealed original containers and kept at SLES must be protected against frost. In the original unopened containers the product can be stored two years. In the temperature range of approx 10°C the flow ability decrease during storage. However the product quality is not negatively influence above a pH value of 4.0 due to the high concentration, the addition of preservative is not necessary.

2, Titanium Dioxide

Store in a cool, ventilated warehouse. Pack tightly.
Do not store or transport with acids.
Store in a cool, ventilated warehouse.
Keep away from fire and heat sources.
Store separately from acids and avoid mixing.
The storage area should be equipped with appropriate materials
to contain leaks.

.

3, CDEA

Amber viscous liquid with a slightly characteristic odor. Soluble in water, anhydrous ethanol, 80% ethanol by mass and 40% ethanol by mass, etc., insoluble in mineral oil and isopropyl myristate. Iodine value ≤10gI2·(100g)-1, saponification value 5~20mgKOH·g-1, acid value ≤4.0mgKOH·g-1, water mass fraction ≤0.5%, ash mass fraction ≤0.25%, aqueous solution turbidity point 32~40℃, pH value of 5% aqueous solution 3.5~8.0. Polyoxyethylene-polyoxypropylene lanolin is different from ordinary polyoxyethylene lanolin. It is liquid at room temperature and completely soluble in ethanol aqueous solution. The solution containing 90% alcohol by mass is misty. It is an O/W emulsifier and has the function of solubilizing and gently cleaning the skin. Its solution is non-ionic and easy to match with various cosmetic raw materials.

.

3, BETAINE

1. It has excellent stability under both acidic and alkaline conditions, and is cationic in acidic media and anionic in alkaline media. It can be compatible with various types of dyes, surfactants and cosmetic raw materials, is stable to sodium hypochlorite, and should not be heated for a long time above 100°C. It has excellent decontamination, softening, foaming, wetting and antistatic properties, good resistance to hard water, and corrosion inhibition for metals.
2. Low toxicity and low skin irritation..

4, GLYCEROL

1. Store in a clean and dry place, and keep it sealed. Keep it away from moisture, water and heat. Do not mix it with strong oxidants. It can be stored in tinned or stainless steel containers.

2. Pack it in aluminum barrels or galvanized iron barrels or use phenolic resin lined storage tanks. Keep it away from moisture, heat and water during storage and transportation. Do not store glycerin together with strong oxidants (such as nitric acid, potassium permanganate, etc.). Store and transport it according to the regulations for general flammable chemicals.

5, AOS

Widely used in various washing cosmetics: used as the preferred main raw material for washing powder, compound soap, dishwashing detergent, and phosphorus-free detergent; used in shampoo, bath agent, facial cleanser and other cleaning cosmetics; can also be used in industrial detergents
