Salt spray tester

- Testing the reliability of corrosion resistance of metal parts samples respectively

03

Horizontal plug and play life testing machine

Test the plugging and unplugging force and the plugging and unplugging life of various connectors and connecting wires around the product

04

Constant temperature and humidity test chamber-

Equipment for testing the performance of materials in various environments and testing the heat, cold, dry and moisture resistance of various materials.

05

Simulated transport vibration test stand

Simulate the product in the transportation process, bumpy vibration state

Our Clients

- Kuroku's service motto is "We respect every customer, we are committed to serve every customer and we do our best to satisfy their needs".
- ▲ Every year, Kuroku attends different exhibitions, where we make many foreign friends and customers from different countries and regions.
- ◆ Most of these customers we met at the exhibition have maintained long-term relationships with us. They also introduce their friends' companies to us.

Our Advantages

We'll be the right choice for you ~

As a supplier, we have the ability to provide fast service and targeted support for different countries, different markets, and different demands such as quickly modifying and adding your LOGO to neutral product pictures, and manual design and customized typesetting as well as color box.

Kuroku Group has continuous research and development capabilities, and has reserved talents in appearance design & structural design & optical design fields. Every year we will launch some general and innovative projector appearances or models into the market.

Our Advantages

Most important is the quality, we ensure our quality from below part:

a. Raw material control

At our local area, there are many raw material manufacturer and we keep good relationship with them. We have large and stable purchase quantity from them and they guarantee to supply stable quality material to us. They arrange a person who only responsible for our material' s production and delivery to make sure safe quality.

b. Quality control

QC in workshop Four supervisors will check the sizes, sewing and work desks to make sure product meet quality. QC in packaging Three workers check whether the packs contain dust before packaging

c. Quality complains

If any customers make quality complains, we' ll forward it to our service team. They will report directly to our factory manager. Usually we will hold a meeting with production, purchasing and packaging departments in 24 hours, we will response in 48 hours with our feedback and solutions.
