About us 关于我们▶▶▶

Yunwen Technology Co., Ltd. was established in 2019, headquartered in Shenzhen, with a production base located in Shiyan, Shenzhen, covering an area of 4,777 square meters. The company has a registered capital of 30 million yuan, employs over 100 staff, and achieves an annual sales revenue of 150 million yuan. With a monthly production capacity of 100,000 modules, we focus on the R&D and mass production of differentiated LED products to meet various customer needs.

We own a sheet metal factory that produces complete display products and customized solutions, forming a one-stop service system. Our specific products include indoor and outdoor flexible modules, cube screens, spheres, disc screens, and wave screens. We primarily target five commercial display markets: commercial real estate, stage performance, exhibition displays, advertising media, and physical retail displays. Additionally, we have established sales warehouses in Shandong and other locations, creating a comprehensive sales channel aimed at building an outstanding brand.

Our company possesses a complete system for the large-scale R&D, manufacturing, sales, and service of LED display products. Positioned as a "professional supplier of indoor and outdoor soft screens," we leverage industry trends and technologies such as industrial internet. We have introduced nationally leading fully automated LED display production lines, a Class 10,000 clean production workshop, high-cleanliness automated production rooms, standardized product aging lines, R&D laboratories, and various advanced inspection and analysis measurement rooms. With a robust supply chain and production capacity, we empower our brand, lead industry transformation, and provide consumers with a better application experience.

Development History

2019

In 2019, Yunwen Technology conducted market research to understand customer needs and developed a business plan. The company actively explored the market and formed partnerships with several collaborators.

2020

In 2020, Yunwen Technology built a complete industrial chain by investing in the construction of an LED production base in Shenzhen. We established an overall supply chain layout and created a high-quality team, attracting more talent to become an integrated LED service provider for production and sales.

2021

In 2021, Yunwen Technology began its initial development by establishing an R&D team. The company expanded from module production and R&D to the production of complete display products and customized solutions, forming a one-stop service system.

2022

In 2022, Yunwen Technology experienced steady growth as market demand increased, gradually expanding the scale of its business. The company established a good reputation in the industry and set up four major storage bases in Shandong, Shaanxi, Sichuan, and Shenzhen, creating a complete sales channel.

2023

In 2023, with the continuous innovation of LED display technology, Yunwen Technology increased its R&D efforts to adapt to market changes and optimize product quality. We aimed to provide more professional services to our customers. At the same time, we intensified our marketing efforts, strengthened brand building, and further expanded our market share.

2024

In 2024, Yunwen Technology fully launched its operations by establishing its own cabinet factory, creating a one-stop service system. At the same time, we began seeking expansion into international markets, enhancing product quality and service levels to meet the needs of different countries and regions.

LED Flexible Screen

01 High Flexibility

PCB uses flexible soft board and silicone base allowing for any twisting curvature

03 Easy Front Maintenance

05 High flatness, perfect splicing

02 Ultra Light and Thin

Module thickness is only 8mm

04 High Refresh Rate Eliminates vertical lines

Adjustable brightness with low brightness and high gray levels, restoring true beauty.

06 Branded LEDs, highly reliable

Using high-quality LEDs from Ruisheng and Nationstar, offering longer lifespan and higher contrast

Flexible Soft Module Series Product Parameters
